

**ONE PASS MAY
SAVE YOU TIME,**

**BUT TWO PASSES
SAVES YOU MONEY.**

Benefits of Two-Pass Weed Control

Yield Performance

- Provides better consistency and a wider application window for the post application¹
- Helps minimize early-season weed competition that can reduce yield potential²
- Minimizes risk of glyphosate-resistant weed populations
- Residual herbicide applied pre-emergence keeps working weeks after application so developing crops don't compete with weeds for essential nutrients, moisture and sunlight³
- In university testing conducted over two years in Wisconsin, a two-pass program provided greater or equal weed control 97 percent of the time when compared to a one-pass program¹

Business Savings

- On average, the two-pass program increased yields by 8.5 bu/A to 22.6 bu/A over the one-pass programs, resulting in a net benefit of \$13.50/A¹
- Decreased year-end payments
- Planned approach = less risk, stress and last-minute purchases
- Product purchase bundling = lower input costs
- Consistency
